PATENTED

IN THE

UNITED STATES

AND IN

CANADA.

SECTIONAL VIEW

Of the Draw-Head and the Arrangement for holding the Link Pin up.

Office of FRANCIS CORDREY,

Fort Wayne, Ind., 188.....

The above cuts illustrate my invention
 To which I respectfully ask your attention,
 It is designed for coupling cars
 And will save men from many scars;
 Only pull the crank forward a little bit
 And you will find the link will always hit.
 It does away with the bent links,
 And will always couple--"By Jinks."
 'Tis the most simple, durable and practical by far,
 Of all the Couplers contrived for a car:
 Because the rock-shaft always swings
 When the draw-bar plays on its springs.
